## Dune Acres Flood Investigation

The Town of Dune Acres completed a flood investigation to determine the causes of flooding events. The Town understands that the flooding has likely been caused by the extreme precipitation that impacted much of the Duneland area, but the water in the community's only park and recreation area was not receding. The Town investigated pond water levels, groundwater, and stormwater runoff impacts to determine how this problem should be addressed if the area's annual precipitation continues to increase.

The flood investigation report included soil boring information, stormwater runoff calculations, historical data, and field investigation results.

**RESULT:** A flood investigation report was conducted by the Town of Dune Acres.
